

FOLLOWING UP FOR YOUR PROTECTION

The care you receive from Summit Medical Associates does not end with your procedure.

It also includes several follow-up steps starting with your post-procedure counseling session. At that time, we'll go over your prescribed medications and post-procedure instructions for the next three weeks. These instructions will help you take care of yourself properly until your follow-up examination. For your own benefits, please read and follow them carefully.

It's extremely important that you come back to us or see your personal physician for a follow-up examination within three weeks after your procedure. This is an essential final measure to make sure the procedure was complete and that there have been no complications.

If it's been a year or more since your last Pap smear (a lab test for cervical cancer) or if you've never had one, you may schedule it (for an additional fee) at the same time as your post-procedure examination. The Pap smear can be a life-saving test, and we urge you to combine it with your follow-up visit to us.
